### Time Lapse

Although you can't fast-forward life, you can speed up time in your movies with time-lapse photography. This video technique compresses hours of action into mere seconds; clouds roll overhead, the sun races towards the horizon, and flowers bloom before your eyes. Eager to learn the techniques? Register for the time lapse photography workshop and create moments of unsurpassed beauty.

### 360 Panoramic

Do you long to capture the wider perspective? Crave to transcend the barriers of the human eye? Here comes a workshop will teach you to capture the essence of a panorama by stitching photos together. Enter the enthralling world of panoramic photography and merge your snapshots seamlessly together to create the complete 360 degree view.

Mint edition of HT Carried a article on 3d India Community on 15th May 2010

<http://www.livemint.com/2010/05/14211347/Open-your-third-eye.html>

Hitesh Gusani, the proprietor of Cybertec Studio, a website design studio, had developed a rudimentary set-up before Panda. Gusani was always passionate about still photography, but in ...2004 he discovered another dimension to it. A friend posted online a 3D photograph of a desk with the instruction that the viewer should cross his eyes (like looking at the tip of your nose) to be able to see the third dimension. Gusani was thrilled to "see" the edge of the desk "jutting out of the screen" and decided to try it out himself.

#### Product Description

##### Xpand X102

DLP-Link is a communication protocol that uses the DLP chip inside DLPTV and DLP Projectors. The DLP chip sends a flash of light in the transition between Left and Right images, and the glasses that are recognizing this encoded white signal are syncing to the image. This Type of glasses do NOT require emitter. the glasses work with Mitsubishi and Samsung DLP TV and with 3D ready projectors.
